Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

- 1. (Currently amended) A polymeric particle comprising a polyvinyl alcohol and having a diameter of about 500 microns or less, wherein the particle has a first density of pores in an interior region and a second density of pores at a surface region, the first density being different from the second density, and wherein the particle has a first average pore size in the interior region and a second average pore size at the surface region, the first average pore size being greater than the second average pore size.
- 2. (Previously presented) The polymeric particle of claim 1, wherein the second density is greater than the first density.
 - 3-4. (Cancelled).
- 5. (Original) The polymeric particle of claim 1, wherein the particle has a diameter of about 10 microns or more.
- 6. (Original) The polymeric particle of claim 1, wherein the particle has a diameter of about 100 microns or more.
- 7. (Original) The polymeric particle of claim 6, wherein the particle has a diameter of about 300 microns or less.

Serial No.: 10/637,130 Filed: August 8, 2003

8. (Original) The polymeric particle of claim 1, wherein the particle has a diameter of about 300 microns or more.

- 9. (Cancelled).
- 10. (Cancelled)
- 11. (Original) The polymeric particle of claim 1, wherein the particle is at least partially coated with a substantially bioabsorbable material.
- 12. (Original) The polymeric particle of claim 1, wherein the particle has a density of from about 1.1 grams per cubic centimeter to about 1.4 grams per cubic centimeter.
- 13. (Original) The polymeric particle of claim 1, wherein the particle has a sphericity of about 0.9 or more.
- 14. (Original) The polymeric particle of claim 1, wherein, after compression to about 50 percent, the particle has a sphericity of about 0.9 or more.
- 15. (Original) The polymeric particle of claim 1, wherein the particle comprises about 2.5 weight percent or less polysaccharide.
- 16. (Original) The polymeric particle of claim 15, wherein the polysaccharide comprises alginate.
- 17. (Original) The polymeric particle of claim 16, wherein the alginate has a guluronic acid content of about 60 percent or greater.

Serial No.: 10/637,130 Filed: August 8, 2003

Page : 4 of 9

18. (Original) The polymeric particle of claim 1, wherein the particle is substantially insoluble in DMSO.

- 19. (Original) The polymeric particle of claim 1, wherein the particle is substantially free of animal-derived compounds.
- 20. (Currently Amended) A polymeric particle comprising a polyvinyl alcohol and having a diameter of about 500 microns or less, wherein the particle has a first average pore size in an interior region and a second average pore size at a surface region, the first average pore size being different from greater than the second average pore size.
 - 21. (Cancelled).
 - 22. (Currently amended) A composition, comprising:

a plurality of particles, at least some of the plurality of particles comprising a polyvinyl alcohol and having a diameter of about 500 microns or less, wherein at least some of the particles having a diameter of about 500 microns or less have a first density of pores and a first average pore size in an interior region and a second density of pores and a second average pore size at a surface region, the first density being different from the second density, and the first average pore size being greater than the second average pore size; and

a carrier fluid, the plurality of particles being in the carrier fluid.

- 23. (Original) The composition of claim 22, wherein the carrier fluid comprises a saline solution.
- 24. (Original) The composition of claim 22, wherein the carrier fluid comprises a contrast agent.

Serial No.: 10/637,130 Filed: August 8, 2003

Page : 5 of 9

25. (Original) The composition of claim 22, wherein the plurality of particles has a mean diameter of about 500 microns or less.

- 26. (Original) The composition of claim 22, wherein the plurality of particles has a mean diameter of about 10 microns or more.
- 27. (Original) The composition of claim 22, wherein the plurality of particles has a mean diameter of about 100 microns or more.
- 28. (Original) The composition of claim 27, wherein the plurality of particles has a mean diameter of about 300 microns or less.
- 29. (Original) The composition of claim 22, wherein the plurality of particle has a mean diameter of about 300 microns or more.
 - 30. (Currently Amended) A composition, comprising:

a plurality of particles, at least some of the plurality of particles comprising a polyvinyl alcohol and having a diameter of about 500 microns or less, wherein at least some of the particles having a diameter of about 500 microns or less have a first average pore size in an interior region and a second average pore size at a surface region, the first average pore size being different from greater than the second average pore size; and

a carrier fluid, the plurality of particles being in the carrier fluid.

31.-40. (Cancelled)

41. (Previously presented) A polymeric particle comprising a polysaccharide and having a diameter of about 500 microns or less, wherein the particle has an interior region defining pores and a surface region defining pores, the particle has a first density of pores in the

Serial No.: 10/637,130 Filed: August 8, 2003

interior region and a second density of pores at the surface region, the first density being different from the second density, and the particle has a first average pore size in the interior region and a second average pore size at the surface region, the first average pore size being greater than the second average pore size.

- 42. (Previously presented) The polymeric particle of claim 41, wherein the particle has a diameter of about 10 microns or more.
- 43. (Previously presented) The polymeric particle of claim 41, wherein the particle has a diameter of about 100 microns or more.
- 44. (Previously presented) The polymeric particle of claim 43, wherein the particle has a diameter of about 300 microns or less.
- 45. (Previously presented) The polymeric particle of claim 41, wherein the particle has a diameter of about 300 microns or more.
- 46. (Previously presented) The polymeric particle of claim 41, wherein the particle comprises about 2.5 weight percent or less of the polysaccharide.
- 47. (Previously presented) The polymeric particle of claim 46, wherein the polysaccharide comprises alginate.
- 48. (Previously presented) The polymeric particle of claim 20, wherein the particle has a diameter of about 10 microns or more.
- 49. (Previously presented) The polymeric particle of claim 20, wherein the particle has a diameter of about 100 microns or more.

Serial No.: 10/637,130 Filed: August 8, 2003

50. (Previously presented) The polymeric particle of claim 49, wherein the particle has a diameter of about 300 microns or less.

- 51. (Previously presented) The polymeric particle of claim 20, wherein the particle has a diameter of about 300 microns or more.
- 52. (Previously presented) The polymeric particle of claim 20, wherein the particle comprises about 2.5 weight percent or less polysaccharide.
- 53. (Previously presented) The polymeric particle of claim 52, wherein the polysaccharide comprises alginate.
- 54. (Previously presented) The composition of claim 30, wherein the plurality of particles has a mean diameter of about 500 microns or less.
- 55. (Previously presented) The composition of claim 30, wherein the plurality of particles has a mean diameter of about 10 microns or more.
- 56. (Previously presented) The composition of claim 30, wherein the plurality of particles has a mean diameter of about 100 microns or more.
- 57. (Previously presented) The composition of claim 56, wherein the plurality of particles has a mean diameter of about 300 microns or less.
- 58. (Previously presented) The composition of claim 30, wherein the plurality of particle has a mean diameter of about 300 microns or more.
